

Could Argentina contribute to the energy transition?

In the light of the foregoing, Argentina could significantly contribute to the energy transition by being a global supplier of natural gas. Argentina has one of the biggest natural gas reserves in the world.

What is Argentina's energy transition plan?

In a bid to outline the country's key energy goals and guidelines to achieve them, in October 2021, Argentina's Ministry of Economy approved the 'Guidelines for an Energy Transition Plan to 2030', through Resolution 1036/2021. The guidelines call for structural change in the systems of supply and use of energy.

Are Argentine oil and gas companies moving towards the power industry?

The Argentine market is not stranger to the shift of oil and gas companies towards the power industry. Different long-standing Argentine oil and gas companies like Tecpetrol, Pan American Energy (PAE) and YPF have been investing in renewable generation projects in the past years.

How can Argentine energy contribute to a net zero economy?

Its gas, solar, wind, hydrogen and lithium resources can be exported to contribute with the net zero economy. This chapter studies the past, present and future of the Argentine energy mix and energy policy, with a focus on the opportunities and challenges that Argentina will face during the following decades.

Does Argentina have a potential for alternative energy resources?

On the other hand, technological breakthroughs relating to hydrogen and lithium have enhanced Argentina's potential over alternative energy resources. The conditions in Patagonia and the northwest of the country enable scaling-up at a competitive cost since abundant wind and solar power are available to produce green hydrogen.

What is Argentina's approach to renewables?

Argentina's approach to renewables involves a mix of choices intended to apply simultaneously to different sectors and industries. Traditionally, biomass and hydroelectric energy developments have been a major part of the renewable share in Argentina.

POSCO Holdings has officially completed its lithium hydroxide production plant in Guemes, Salta Province, Argentina, as announced on October 27. The ceremony to mark this milestone took place on October 24 at the Hombre Muerto Salt Pan, a key salt lake in the region. This new facility is capable of producing 25,000 tons of lithium hydroxide annually, a crucial ...

The government of Argentina has approved the National Energy Transition Plan to 2030 with the support of the Inter-American Development Bank (IDB) and technical assistance from Global Factor, a company specialized in the sector. This plan aims to change the country's energy matrix towards cleaner and more

sustainable sources, thereby reducing greenhouse gas

3 ???&#0183; While details regarding updated official wind power capacity in Chubut have yet to be made available, the latest data from the department of energy transition and planning of Argentina Ministry of ...

According to data from the National Greenhouse Gas (GHG) Inventory corresponding to the Fourth Biennial Report (IBA) 2020-21, GHG emissions from the energy sector in 2018 reached 51% of total emissions (366Mtpco2e). In this context, it is essential to develop a strategic policy for the energy transition and its implementation in the national territory, considering

The energy transition, and especially the increased electrification of transportation sector, moves forward at great speed. Its new center is Latin America's lithium triangle, where new batteries of electric vehicles will be sourced. But there is an inevitable conflict coming between water availability and mining, says Rebecca Bertram. [Read More](#)

Argentina's natural gas reserves have the potential to make the country a global energy transition power player. Discover how new government initiatives can make this a reality by boosting ...

Argentina is aiming to generate 57% of its energy from renewable sources by the end of the decade, according to an official energy transition plan launched in late June. The country will also target 5,000 kilometres of new transmission lines, an 8% reduction in overall energy demand, and one gigawatt (GW) of distributed generation, with the government putting ...

Energy Transition in Argentina: Past, Present and Future Tom&#225;s Lanardonne and Juan Cruz Mazzochi
