

Canada ascend solar

Who is Solar Ascent?

Not only are we deeply passionate about solar energy production, we've got the experience to back it up. We've been busy working with our clients to make the grid a little greener. Since 2018 Solar Ascent has been an industry leader in renewable energy design and installation in Eastern Canada.

How much solar power does Canada have?

The past two decades have been marked by the significant growth of installed capacity for solar photovoltaic power, which in 2022 reached 6,452 megawatts. Canada generated around 4,323 gigawatt-hours of energy from solar power in 2022, which provided enough electricity to power over 470,000 typical Canadian homes.

Can solar panels be installed on residential buildings in Canada?

For instance, about half of Canada's residential electricity requirements could be met by installing solar panels on the roofs of residential buildings. The past two decades have been marked by the significant growth of installed capacity for solar photovoltaic power, which in 2022 reached 6,452 megawatts.

What is Ascent thin-film solar power?

Ascent thin-film is the solar power solution for scenarios where traditional rigid panels won't work. Most of the world still relies on heavy and rigid silicon-based modules, encapsulated in glass with a standard 60-cell x 72-cell module design.

What is Canada Greener Homes & how does it work?

What is Canada Greener Homes and How Does it Work? The Canada Greener Homes program was launched by the Federal Government in 2021. The program aims to help homeowners understand what can be done to make their homes more comfortable and efficient, and provide incentives to implement energy efficiency changes.

How big is solar PV capacity in Canada?

Solar PV capacity in Canada (2007-2022, in megawatts) The bar chart displays annual installations of solar PV capacity in Canada since 2007, in megawatts. The curve shows the rapid increase in cumulative capacity installations from 26 megawatts in 2007 to 6,452 megawatts in 2022.
