

How are microgrids categorized?

Microgrids can be categorized via different aspects ranging from the structure such as DC, AC, or hybrid to control scheme such as centralized, decentralized or distributed. This chapter reviews briefly the microgrid concept, its working definitions and classifications.

What is Microgrid modeling & operation modes?

In this paper, a review is made on the microgrid modeling and operation modes. The microgrid is a key interface between the distributed generation and renewable energy sources. A microgrid can work in islanded (operate autonomously) or grid-connected modes. The stability improvement methods are illustrated.

What is the difference between a microgrid and An islanded grid?

In islanded mode, a portion of the grid is cut off from the main grid, while the microgrid or detached grid continues to receive power from the DG there. Both planned and unplanned islanding are possible. Generally, intentional islanding is applied for purposes such as avoiding blackouts, securing the DGs and power system and maintenance.

What is Microgrid technology?

It is a small-scale power system with distributed energy resources. To realize the distributed generation potential, adopting a system where the associated loads and generation are considered as a subsystem or a microgrid is essential. In this article, a literature review is made on microgrid technology.

How to classify islanding and non-islanding events using microgrid test model?

In the second stage, a residual neural network model which is fine-tuned with optimal hyperparameters is determined in order to detect and classify islanding and non-islanding events. Thus, feature image data obtained from microgrid test model are structured as input to residual neural network for classifying of islanding and non-islanding events.

What is the layered structure of a microgrid?

The layered structure of the microgrid is explained followed by brief explanation of modes of operation, control, and hierarchical control scheme of the each microgrid. The concept and modeling of PV, MPPT algorithms, wind turbine system, batteries, and FC is also discussed.
