

Exergy group Mongolia

What type of energy is used in Mongolia?

In Mongolia, total primary energy supplies continue to be dominated by coal, and electricity generation is largely provided by coal-fired power plants, particularly combined heat and power plants. In 2018, 93% of all electricity was produced by thermal power plants, and 98% of all district heat was provided by coal-fired systems.

What are Mongolia's Energy goals?

The government of Mongolia has set targets to increase the share of generation capacity from renewable energy sources to 20% by 2023 and 30% by 2030, and to build export-oriented power plants.

What is the Green methanol project in Inner Mongolia?

The green methanol project in Inner Mongolia is China's first 500,000-ton-level project that synthesizes green methanol by using wind and solar power for the electrolysis of water to produce hydrogen and combining it with carbon dioxide captured from industrial operations.

Will Inner Mongolia support Erdos?

Inner Mongolia will support Erdos in aligning the development of hydrogen production from renewable energy sources and that of the modern coal chemical industry, she added. North China's Inner Mongolia Autonomous Region, a major coal producer in the country, aims to speed up the development of its new-energy sector in 2023.
