2 ???· Intraday power prices in Germany jumped and natural gas-fired electricity generation rose to a two-year high this week as low wind speeds continue to depress wind power output. ...

Germany: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

Germany is aiming to be climate neutral by 2045 - five years earlier than the European Union. In order to meet this ambitious target, the energy supply has to be fundamentally transformed: after all, this is where most greenhouse gas emissions occur. A lot has to happen at all levels in a relatively short time: fossil fuels such as coal, oil and natural gas - still the most ...
