

Are HJT solar panels bifacial?

Due to the technical production and properties of N-type silicon cells, the bifaciality of HJT Solar Panels is the highest on market at 80-95%. PERC bifacial factor is on average level 70%. HJT cells are the best solution for bifacial solar modules.

Are bifacial solar panels better than heterojunction solar panels?

The structure of bifacial panels is similar to the heterojunction solar panel. Both include passivating coats that reduce resurface combinations, increasing their efficiency. HJT technology holds a high recorded efficiency of 26.7%, but bifacial surpasses this with an efficiency of over 30%.

Which solar module is best for bifacial heterojunction?

The 132-cell solar module with no PID or LID and 210 mm x 105 mm N-type HJT cells, impresses with its very high wattage. As a bifacial heterojunction module, it impresses with the lowest power losses and excellent temperature behavior at the highest bifaciality levels. 132-cell Glass-Glass solar module with 210 mm x 105 mm HJT cells

Is HJT a bifacial module?

HJT cell has a high bifaciality factor of 92%, making HJT deliver a great performance when designed as a bifacial module. This technology is becoming more popular for utility-scale applications, which seek to take advantage of the albedo resource.

What is bifacial solar panel?

HJT is considered one of the top cell technologies with highest bifaciality. Higher bifaciality allows more energy yield on the back. Bifacial solar modules catch and convert solar light fully, so bifacial cell generates 15-30% more power. Bifacial Solar Panel- best Solution for Utility scale investments?

What is the difference between bifacial panels and HJT?

Generally bifacial panels enable 5%-30% energy gain on the back, depending on the factors such as ground reflection, region type etc. HJT (n-type) demonstrates unique advantages in high temperature/high irradiance areas. Compared to the PERC module, HJT features a lower power temperature coefficient and higher output power.
