

How to connect photovoltaic solar panel meter

How does a utility meter connect to a solar panel?

There is an ALTERNATIVE UTILITY CONNECTION called a "Supply or Line Side" connection. This connection is made BEFORE the main breaker. A junction box is added between the utility meter and the main service panel. Then the wires from the utility meter, the main breaker panel, and the PV solar are connected in the junction box.

How do I connect solar panels to the grid?

To connect solar panels to the grid, you need to install a bi-directional meter on your home. This allows energy produced by your solar panels to be fed into the grid when you're not using it, and for you to draw energy back from the grid when you need it.

How do you connect a solar inverter to a utility meter?

A junction box is added between the utility meter and the main service panel. Then the wires from the utility meter, the main breaker panel, and the PV solar are connected in the junction box. An adequately sized PV service disconnect box must be used prior to making the connection between the junction box and the solar inverter.

How do I connect a PV system to the grid?

Grid Interconnection Application: Before connecting a PV system to the grid, an application must be submitted to the local utility company. This application includes detailed specifications of the PV system, such as its capacity, the type of inverter used, and the configuration of the solar array.

Why should a solar PV system be connected to the grid?

For financial benefit. Connecting your solar PV system to the grid allows you to take advantage of the FIT, which gives you a fixed amount of money for each kWh of electricity you generate. On top of these payments for energy generation, you also receive a sum of money for feeding any surplus energy into the grid.

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.
