What are interposing relay panels in industrial control?

Interposing relay panels in industrial control are used to communicate the signals and status between the Automation systems such as DCS & PLC and electrical modules in Machine control centre (MCC) such as motor control units, motors, pumps, lamps, and so on.

What is interposing relay?

Interposing Relay is the auxiliary relay for isolating the two different systems or two different devices because these devices may have different Zero Voltage references. These two devices may be a Programmable Logic Controller and Contactor. The main purpose of interposing relay is to minimize the load on the controller relay.

How close should the interposing relays be to the sel-849?

SEL recommends mounting the interposing relays as close as possible to the SEL-849 to reduce voltage drop and electrical interference induction on the input wires. Figure 4 shows an example control system with an SEL-849 and interposing relays.

Where should the interposing relays be placed?

The end user has flexibility in placing the relays to meet the system needs. SEL recommends mounting the interposing relays as close as possible to the SEL-849 to reduce voltage drop and electrical interference induction on the input wires.

Which type of interposing relay is needed for a PLC?

The PLC relay is DC type with an output voltage of 24 V. But we need a DC type interposing relay with a coil voltage of 24V DC but the contact AC type with 230 V. The PLC operates interposing relay in the first stage & Contactor through its Auxiliary contacts.

The commune of Saint-Pierre is made up of the island of Saint-Pierre proper and several nearby smaller islands, such as L'Île-aux-Marins. Although containing nearly 90% of the inhabitants of Saint Pierre and Miquelon, the commune of Saint-Pierre is considerably smaller in terms of area than the commune of Miquelon-Langlade, which lies to its northwest on Miquelon Island.

In this case, an interposing relay with contacts rated for operation at 5 A(>3 A) at 110 VAC would be used as an interposing relay "between" the PLC relay and the Controller. The coil of the interposing relay should require less voltage and current than the driving relay is rated for, and the contacts of the interposing relay must be rated ...

In this application, the mismatch may be in terms of voltage ratings and/or current ratings. As with the input interposing circuit shown previously, the task of the relay in an output interposing circuit is to be controlled by the PLC's output channel and, in turn, direct power to a field device that is itself incompatible with the PLC's ...
