

Is it okay to install photovoltaic panels on the north side of the roof

Can solar panels be installed on a north-facing roof?

With the growing demand for solar energy, many homeowners are beginning to ask the question of whether or not solar panels can be installed on a north-facing roof. While it is not the standard recommendation, it is possible to install solar panels on a north-facing roof and still receive the financial and environmental benefits of solar energy.

Should solar be installed on a south facing roof?

Installing solar just about made financial sense on a south facing roof. But installing on a north facing roof made absolutely no sense. That's because a north facing solar system typically produces about 56% of the output of a south facing system.

Is my roof suitable for solar panels?

If the sun sets in front of you, it's west-facing; if it sets to the left, it's north-facing; and if it sets on the opposite side of the property, it's east-facing. Here's how an installer will decide if your roof is suitable for solar panels, including assessing its direction, usable space, and loft.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m², and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Can a flat roof hold solar panels?

This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels. Drilling into a flat roof can cause leaks, so an installer will usually ballast the panels instead - but these will add around 80kg per panel.

Are north facing solar panels worth the money?

With electricity prices rising, north facing solar panels are now often worth the money. Long ago, when the year was 2010, electricity was cheaper than it is now and solar panels were way more expensive. Installing solar just about made financial sense on a south facing roof. But installing on a north facing roof made absolutely no sense.

Perhaps surprisingly, green roofs are actually well suited for PV - together they make up a biosolar roof. The solar panels do need to be installed at the same time as the green roof, however, since the mount is fitted ...

Panel Installation: Place each solar panel onto the stanchions and connect the plug connections for each panel.
