

# Latvia onegrid energies

How much energy does Latvia use?

Latvia is a net energy importer. Primary energy use in Latvia was 49 TWh, or 22 TWh per million persons in 2009. In 2018, electricity consumption per capita was 3731 kWh. Latvia has adopted the EU target to produce 50% of its energy from renewable sources by 2030.

What is the main renewable resource in Latvia?

The main renewable resource is hydroelectric power. Latvia has laws that regulate the building of power plants and plans to sell electricity at higher prices. This is a stimulus for investment, especially taking into consideration the fact that Latvia cannot offer big subsidies in order to attract investment.

What is a hydro power station in Latvia?

Hydro is an important power source in Latvia, and the Ēģu Hydroelectric Power Station is the oldest hydro power station in the country, built in 1940. It was agreed in 2018 that Estonia, Latvia and Lithuania would connect to the European Union's electricity system and desynchronize from the Russian BRELL power system.

Can Latvia import natural gas from Russia?

From 1 January 2023 Latvia banned the import of natural gas from Russia. The replacement comes from connections to LNG terminals, the Klaipėda LNG terminal in Lithuania, and from 2024 the recently-opened Inkoo LNG terminal in Finland. JSC Conexus Baltic Grid is the natural gas transmission system operator in Latvia.

With projects in both North and South America, oneGRID is committed to responsible development that respects local communities and minimizes environmental impact. oneGRID's transmission projects provide an opportunity for system operators to tap into new sources of energy including hydroelectric, wind and other renewables.

You would love to watch this! Enjoy a short impact video of our solution. Through our game-changing models, #OnePlastic is enabling hard-to-reach communities to gain access to renewable energy....
