

# New Zealand dry cabinet for electronic components

What is a dry cabinet?

A dry cabinet is a storage cabinet that protects electronic components from moisture and humidity. These cabinets are typically used to store sensitive electronic components, such as printed circuit boards and other electronic assemblies, that are sensitive to changes in humidity and temperature.

What is a desiccant dry cabinet?

Our Dry Cabinets are enclosed with a supply of desiccant which maintains an internal environment of 1-50% RH. These desiccant dry cabinets are also called: desiccators, dry boxes, dehumidifying cabinets, and ultra low humidity storage cabinets and often times used for moisture sensitive devices (MSD) and printed circuit boards (PCB).

What are xdry cabinets?

Terms & Conditions &#169; 2024 XDry Cabinets All rights reserved. Dry Cabinets for moisture sensitive devices storage, printed circuit boards, electronic components, bare board pcbs, optics and cameras.

What is a durable cabinet enclosure?

Durable cabinet enclosure is constructed from welded 1.2mm-thick cold-rolled steel and the door is made from tempered glass. Air-tight seal prevents dust or moisture from entering the cabinet. Control system will maintain the relative humidity level for up to 24 hours after the power is shut off.

Why should you use a dry cabinet?

This helps to prevent corrosion and other moisture-related damage to the stored components. Dry cabinets are commonly used in electronics manufacturing and repair facilities, as well as in research and development labs and other settings where electronic components need to be stored in a controlled environment.
