

Norfolk Island solaris solution

Does Norfolk Island have too much solar energy?

That's pretty impressive given its remoteness and a population of 1,849. But this uptake has also caused some headaches in managing Norfolk Island's electricity network, with too much solar energy goodness generated at times. The Tesla battery system installed in December 2020 has helped out on that front.

How many solar panels are there in Norfolk Island?

44 km of high and 44 km of low voltage cabling. Distributed household rooftop PV systems. There have been more than 555 small-scale solar power systems installed on Norfolk Island, with a collective capacity of 1,770 kW. That's pretty impressive given its remoteness and a population of 1,849.

Why is Norfolk Island transitioning to green energy?

Norfolk Island is transitioning to green energy to reduce its dependence on diesel-fired generation, which is becoming more expensive and more difficult to source as countries around the world seek to decarbonize their economies. This initiative is comprised of several interrelated elements: Project Background

Does Norfolk rely on diesel?

Like many island communities, Norfolk has traditionally relied on diesel for electricity generation. The community is in the process of shifting entirely to much cheaper and cleaner renewable energy, but that transition can't happen fast enough.

What equipment does Norfolk Island have?

Among Norfolk Island's electricity generation and infrastructure assets: 6 x 1.0MW diesel generators. 4 x 750 kVA 415/6600 volt step-up transformers. 125 kW standby generator for powerhouse essentials, hospital and airport. A 2MW Tesla battery system for slurping up surplus solar energy.

How much does electricity cost on Norfolk Island?

Electricity tariffs on Norfolk Island are dynamic and reflect the operation of the power system each and every half hour. Residents with a time-of-use meter pay and receive the dynamic tariffs. \$0.90 per day for daily supply charge.
