How does the electricity grid work in Norway?

The electricity grid enables electricity transport from producers to consumers, and connects Norway's power system to other countries' systems. The three fundamental functions of the power supply system are: A reliable supply of electricity is crucial in modern society.

What are the three levels of the Norwegian electricity grid?

The Norwegian electricity grid consists of three levels: the transmission grid (operated by Statnett), the regional distribution grid and the local distribution grid. Both the regional and the local distribution grids are considered as distribution systems, as defined by EU legislation.

Who owns the transmission grid in Norway?

Statnett owns the transmission grid in Norway, and is the transmission system operator (TSO). Statnett is a state-owned enterprise, and the Ministry of Energy is responsible for the state's ownership. Municipalities and county authorities own most of the regional and distribution grids, but there is also some amount of private ownership.

What is the electricity market like in Norway?

Norway has an open electric market, integrated with the other Nordic countries over the Synchronous grid of Northern Europe. Export and import is routine over the direct power links to Sweden, Denmark, and the Netherlands. The market is handled by Nord Pool, and has 5 price zones in Norway. Financial future contracts are traded at NASDAQ OMX.

Where are electricity production resources located in Norway?

Electricity production resources are often located far from where consumption takes place. A well-developed electricity grid makes it possible to transmit power from the hydropower plants in the southwest and north to consumers in other parts of Norway and abroad.

Why does Norway have a power exchange system?

The power exchange between Norway and other countries ensures sound overall resource use and improved value creation. The electricity grid enables electricity transport from producers to consumers, and connects Norway's power system to other countries' systems.
