

Permanent magnet wind motor is a generator

Do you need a permanent magnet motor for a wind power generator?

Magnets,Magnets,Magnets! Do-it-yourselfers build wind power generators almost exclusively with Permanent Magnet Motors,because they are widely available,reliable because of the nature of their construction,and start generating electricity at almost any RPM. The same cannot be said of some of other types of motors.

Who makes permanent magnet generators for wind turbines?

ABBhas been developing and delivering permanent magnet generators for wind turbines since 2000,helping turbine manufacturers remain both on schedule and within budget. Leading wind turbine manufacturers trust ABB's expertise,and today most of the megawatt-class permanent magnet generators operating in Europe and North America were built by ABB.

What is a permanent magnet DC generator?

Permanent Magnet DC Generators is a low speed generatorthat are pretty reliable and efficient in light winds for use in "off-grid" stand alone systems to charge batteries,or to power low voltage lighting and appliances. They generally have linear power curves with low cut-in speeds of around 10 mph.

Are permanent magnet DC generators a good choice for small scale wind turbines?

The permanent magnet DC generator is a good choicefor small scale wind turbine systems as they are reliable,can operate at low rotational speeds and provide good efficiency especially in light wind conditions as their cut-in point is fairly low.

Can a permanent magnet motor be used as a generator?

The same reasoning is applied when considering a permanent magnet motor as a generator. Spinning the copper wire by using the energy from the wind in the presence of the magnets creates a voltage difference between the two ends of the copper wire.

Can a PMDC motor be used as a wind turbine generator?

In fact,nearly all permanent magnet direct current (PMDC) brushed motors can be used as a permanent magnet PMDC generator,but as they are not really designed to be generators,they do not make good wind turbine generatorsbecause when working as a simple DC generator,the rotating field acts like a brake slowing down the rotor.
