

What are mounting brackets & rails for solar panels?

Mounting Brackets are the primary components that attach the solar panels to the mounting surface. They come in various types depending on the mounting surface (roof, ground, pole, etc.). Rails: Rails are long, horizontal structures attached to the solar panels using clamps. They provide a stable base for the solar panels.

How do you install a solar panel bracket?

The end brackets will have a spot to hold a single panel, and the middle brackets will have a spot to secure two panels. Some solar panel kits may use single panel brackets. The basic is to position the bracket to capture the panel and then tighten the bolt that clamps the bracket to the panel.

Why should you install a solar panel bracket?

The purpose of installing the bracket is to better fix the solar panel. If there is a more convenient and feasible method to fix the solar panel, PVMars will definitely recommend it to you, and effective solutions are based on solar panels' characteristics and your on-site installation environment.
