How long does a psrf-PLL synchronize with a voltage sag?

With the help of the PSRF-PLL,we can able to detect the islanding at the time of 0.3 s due to the nature of the response and we can re-synchronize after 0.75 s. Fig. 21. DG1,DG2,Grid (SOGI-PLL and PSRF-PLL) frequency responses (Hz) in the course of voltage sag condition at 0.3 s,to 0.75 s.

Are MAF-based PLLs accurate under grid voltage harmonics?

The MAF-based PLLs achieve very accurateresponse under grid voltage harmonics compared to all the other PLLs. However,in some cases their performance is poor. For instance,the conventional MAFPLL presents offset errors under non-nominal grid frequencies and has slow dynamics.
