

Can the Democratic Republic of the Congo produce lithium-ion battery cathode precursor materials?

London and Kinshasa, November 24, 2021 - The Democratic Republic of the Congo (DRC) can leverage its abundant cobalt resources and hydroelectric power to become a low-cost and low-emissions producer of lithium-ion battery cathode precursor materials.

What are structural batteries?

This type of batteries is commonly referred to as "structural batteries". Two general methods have been explored to develop structural batteries: (1) integrating batteries with light and strong external reinforcements, and (2) introducing multifunctional materials as battery components to make energy storage devices themselves structurally robust.

How can Africa extend its access to the battery industry?

In so doing, the country and the rest of Africa can extend their access from the USD271 billion battery precursor segment to the more lucrative USD1.4 trillion combined battery cell production and cell assembly segments of the battery minerals global value chain.

Can a 1U CubeSat battery be a structural battery?

Capovilla and coworkers later developed a structural battery as an external face of a 1U CubeSat, and also conducted FE analysis to prove the stability of the proposed batteries under launch and find optimizing methods .

What are structural battery composites (SBCs)?

Structural battery composites (SBCs) represent an emerging multifunctional technology in which materials functionalized with energy storage capabilities are used to build load-bearing structural components.

How much would a DRC plant cost?

This is three times cheaper than what a similar plant in the U.S. would cost. A similar plant in China and Poland would cost an estimated \$112 million and \$65 million, respectively. Precursor material produced at plants in the DRC could be cost competitive with material produced in China and Poland but with a lower environmental footprint.

Compared with rechargeable zinc ion batteries with  $\text{MnO}_2$  cathode used previously in distributed energy storage in drones (), zinc-air batteries are particularly attractive for use as biomorphic structural batteries because of their high theoretical energy density, which exceeds that of lithium-ion batteries by five times (7, 8). Moreover, sufficient stiffness and ...

2 Results and Discussion 2.1 Electrochemical Performance. The specific capacities and energy densities of the tested structural battery cells are presented in Table 1. Both cell types tested had a nominal voltage during

Structural battery composites are a promising material that can help improve the efficiency of electric ... Dr. Johanna Xu and Prof. Fang Liu. Without your help and guidance, nothing of what I did could have been possible. I am looking forward to continuing the work together for the rest of my PhD studies. I would also like to thank the people at

Combining load-bearing with energy storage capabilities to create multifunctional structural batteries is a promising way to minimize the detrimental impact of battery weight on the aircraft.

Structural battery packs are multifunctional materials that serve both for energy storage and structure. As a result, redundant structural elements can be removed, eliminating weight from other parts of the vehicle. They are ...

Structural batteries hold particular promise for decarbonizing the aviation industry. Here, the authors demonstrate that waterglass, an earth-abundant water-soluble silicate adhesive, can be used ...

However, one of the key challenges to be addressed before achieving multifunctionality in structural batteries would be the design of a suitable multifunctional structural battery electrolyte. The structural battery ...

Due to the vast reserves of cobalt found in the country, an essential component of EV lithium-ion batteries, the DRC has been referred to as "the Saudi Arabia of the electric vehicle age", showcasing considerable ...
