

The United Kingdom relied on fossil fuels for 40% of its electricity in 2023. Its per capita emissions were below the global average, and three times lower than in 2010. The country still relies on gas for 34% of its electricity production, but its coal phase-out is almost complete with the last remaining coal plant set to close by October 2024.

The United Kingdom is also an historically important oil and gas producer, which has underpinned domestic energy security and supported strong economic activity and quality jobs. Offshore oil ...

United Kingdom Energy and Natural Resources. Adam Dann and Helen Miller. Summary. The UK's new Labour Government's first Budget has revealed key measures, aiming to support the UK's transition into cleaner energy. Whilst many changes are largely positive for the renewable sector, the Budget does highlight some potentially challenging times ...

Energy mix of the United Kingdom over time. Energy in the United Kingdom came mostly from fossil fuels in 2021. Total energy consumption in the United Kingdom was 142.0 million tonnes of oil equivalent (1,651 TWh) in 2019. [2] In 2014, the UK had an energy consumption per capita of 2.78 tonnes of oil equivalent (32.3 MWh) compared to a world average of 1.92 tonnes of oil ...
