

Uruguay solar smart invest

How much electricity did Uruguay export in 2022?

In 2022, exports of electricity represented \$222 million which was less than 50 percent of the total amount of electricity exported in 2021. This decrease was primarily due to a severe drought which adversely affected the generation in Uruguay.

How much electricity does Uruguay generate?

According to 2022 data from MIEM, Uruguay generated 14,759 GWh of electricity, 13,343 GWh for internal demand and exported 1,416 GWh to Brazil and Argentina. Typically, Uruguay generates a surplus of electricity due to an excess of wind-power capacity.

What percentage of energy is generated by biomass in Uruguay?

In 2021, biomass represented 41 percent of the total energy supply in Uruguay, while oil and its derivatives were responsible for 42 percent. Uruguay's high percentage of biomass energy generation is a result of cellulose industry expansion where energy is generated from wood waste products.

Why does Uruguay generate a surplus of electricity?

Typically, Uruguay generates a surplus of electricity due to an excess of wind-power capacity. The country seeks to identify additional domestic uses for excess electricity and potentially increase exports to Argentina and Brazil.

Will Uruguay become a leading country in the development of E-Fuels?

Due to its highly decarbonized energy sector with strong wind and solar capacity, Uruguay is expected to become a leading country in the region in the development of e-fuels, or synthetic fuels that are produced using renewable energy.

How much sunlight does Uruguay get a year?

Uruguay receives an average 1,700 KW per square meter of sunlight a year, on a par with Mediterranean countries although solar represents only a fraction of the country's total electricity production.

While larger utility companies with solar divisions alongside other energy sources traditionally perform well, several companies focus only on solar that are worth investing in this year.
