What does DC mean on a solar panel?

It is the unit of measurement for how utility companies measure how much electricity was sent to a home or commercial building from an electric utility. DC - Direct Current. When using solar, your solar panels will capture Direct Current (DC) power from the sun.

What is a photovoltaic system?

Photovoltaics (PV): Devices that convert solar energy into electricity using semiconductors (this conversion is called the photovoltaic effect). Solar panels are photovoltaics and make up a PV system. Power output/rating: The number of watts a solar panel produces in ideal conditions.

What is a solar panel?

Solar photovoltaic (PV) panels convert sunlight into usable electricity by using cells, usually made from silicon, a semiconductor material, embedded in a metal frame with a glass casing. Solar thermal panels are another type of solar panel that can utilise the sun's power.

What is the big solar energy glossary?
