What is a solar panel mount?

The purpose of a solar panel mount is to serve as a foundation for a solar panel. Mounting systems allow for solar panel arrays to be positioned in the most effective location to maximize the panel's exposure to sunlight. The type of solar panel mounts will vary widely depending on the rooftop or surface type where it is being installed on.

Why do solar panels need a mounting system?

Mounting systems are essential for the appropriate design and function of a solar photovoltaic system. They provide the structural support needed to sustain solar panels at the optimum tilt, and can even affect the overall temperature of the system. Based on the selection of the solar mounting structure, the cooling mechanism will be different.

Can solar panels be installed with solar panel mounts?

Enter your zip code below to find out the potential savings for installing solar panels with solar panel mounts on your home. Solar panel mounts secure solar panels either to your roof or on the ground. Solar panel mounts typically account for 10% of the total solar panel installation cost.

Do solar panels need mounting hardware?
